## Pathway Manager for RTT: Monitor patient waiting times.

### Build Patient Pathways

Pathway Manager uses sophisticated matching techniques to identify events in your organisation's data systems that belong to the same pathways and then sequences them to build pathways of care. The specific RTT elements are then identified and counts are generated for reporting purposes.

### Continue to Monitor

The NHS Operating Framework for 2010/11 clearly indicates that referral to treatment data will continue to be published and monitored.

### HealthWare & Cassius

Ardentia's HealthWare data warehouse solution provides a central source of reliable, accurate data. Pathway Manager utilises these data to generate sophisticated RTT reports, which are delivered to end users via the Cassius Vision web-portal.

### GP Commissioning

Ardentia's solution will improve your reporting capacity and give you the flexibility to meet the future requirements of emerging GP commissioning consortia.

Pathway Manager from Ardentia is the most effective tool available to the NHS for monitoring and managing Referral To Treatment times.

External performance management of RTT targets may have ceased, but standards and quality still need to be maintained to avoid a return to long waiting times. This will be especially important in responding to GP led commissioning.

- Readily identify patient pathways and the RTT pathways within them.
- Monitor key stages within RTT pathways - including user-defined stages.
- Free up staff time to work on optimising performance and the delivery of care - RTT Manager handles all the time consuming tasks for you.
- Report on the RTT position of groups of patients e.g. all patients due to attend a clinic.
- Monitor 18 and 26 week waits for both complete and incomplete pathways.

“Better quality data from HealthWare, and more of it, has given us improved visibility of patient pathways and progress, enabling us to improve care delivery and successfully meet RTT and other reporting requirements.”

Andrew Davies, Information Consultant  
Ashford and St. Peter's Hospitals NHS Trust
