

Ensuring patients receive treatment in a timely fashion requires effective waiting list management.

REPORTING MODULES

Waiting Lists: Manage and maintain waiting lists and times.

Made for HealthWare

The Waiting Lists reporting module has been developed to analyse and report on data stored in Ardentia's HealthWare data warehouse solution, which pulls together and cleans data from multiple source systems to provide a central source of reliable, accurate data for your organisation.

Delivered via Cassius

Reports and analysis are delivered to end users using Cassius Vision, our web-based reporting and analysis tool.

Key Components

The module reports on :

- Inpatient and day case waiting times
- Inpatient and day case waiting list events (i.e. additions to and admissions or removals from lists)
- Waiting time to date for outpatient future appointments.

Primary or Secondary Care

Data can be obtained either as a Commissioning Data Set (CDS) or from a Patient Administration System (PAS), making the module suitable for both commissioners and providers of healthcare.

The NHS has made huge strides in reducing waiting lists and times.

Ardentia's solution gives you the essential information you need to manage waiting lists in your organisation. Designed to ensure compliance with NHS guidance, the solution enables both providers and commissioners to monitor and manage waiting lists.

- Monitor weekly and monthly waiting times throughout each year.
- Identify variations in waiting times from previous weeks, months.
- Monitor monthly waiting time trends over several years.
- Analyse derived variables such as length of wait, distribution of waiting times.
- Examine waiting time differences across specialties, consultants, providers, commissioners and GP practices.
- Enhanced capacity to manage in-year changes to the pace and volume of activity.

"The NHS commits to provide convenient, easy access to services within the waiting times set out in [the] Handbook to the NHS Constitution."
